Daigaku: A Japanese Language Learning Application

Daigaku is a comprehensive application for Japanese language acquisition, developed using Python and PyQt5. It features a Spaced Repetition System (SRS) for effective flashcard review, alongside tools for tracking immersion learning materials.

Project Features Overview

1. Flashcard Review System

A powerful and adaptive system for vocabulary acquisition:

- **SRS Algorithm:** Utilizes an intelligent Spaced Repetition System for scientifically optimized learning schedules.
- **Structured Organization:** Manage learning with **Multiple Decks** organized by topic or difficulty.
- **Rich Content:** Flashcards include Japanese expressions complete with definitions, detailed example sentences, and English translations.
- **Progress Tracking:** Comprehensive monitoring of your learning journey and review history.

2. Immersion Material Tracking

A feature to manage and log your passive language exposure:

- **Content Library:** Track a wide range of immersion materials, including books, movies, TV shows, and podcasts.
- **Personal History:** Maintain a log of all materials you have consumed.
- **Difficulty Ratings:** Easily filter materials using a 1-5 star difficulty rating system.
- **Admin Tools:** Dedicated functionality for adding, editing, and deleting materials (restricted to **root** users).

3. User Authentication & Access

A secure login system supporting different access levels:

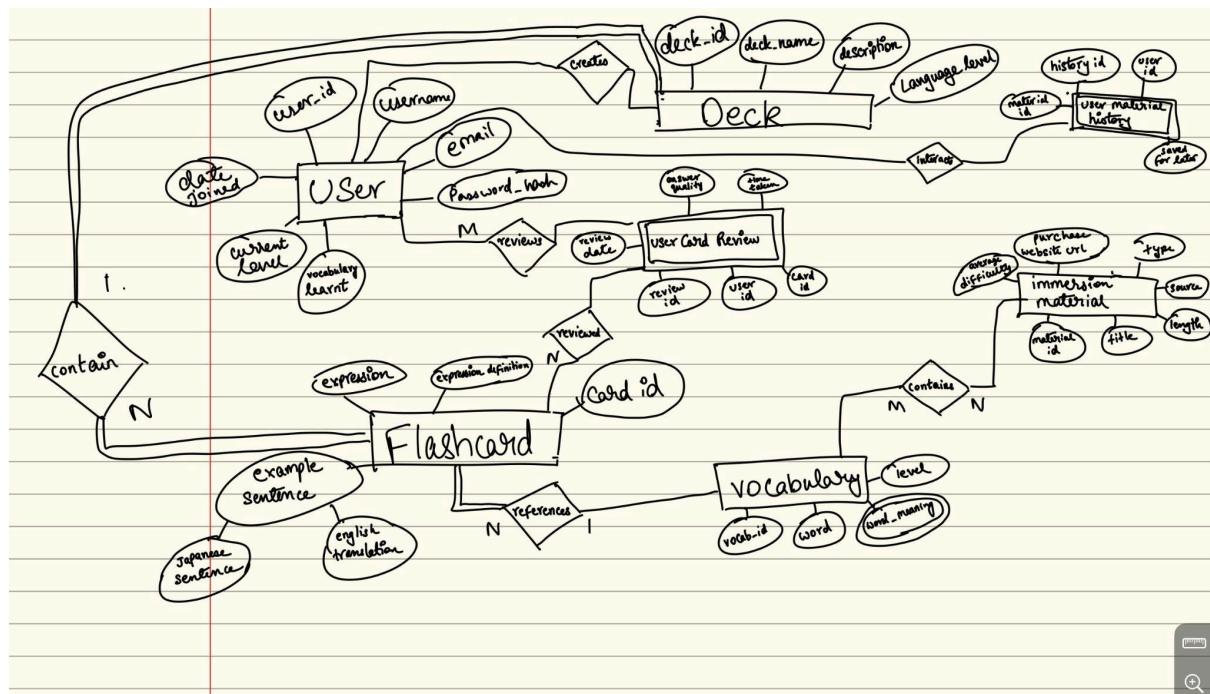

- **Secure Login:** Robust user authentication ensures data security.
- **User Types:**
 - **root:** Possesses full administrative rights, including material management (add/delete).
 - **customer:** Standard user with access to all learning and tracking features.

4. Database Backend

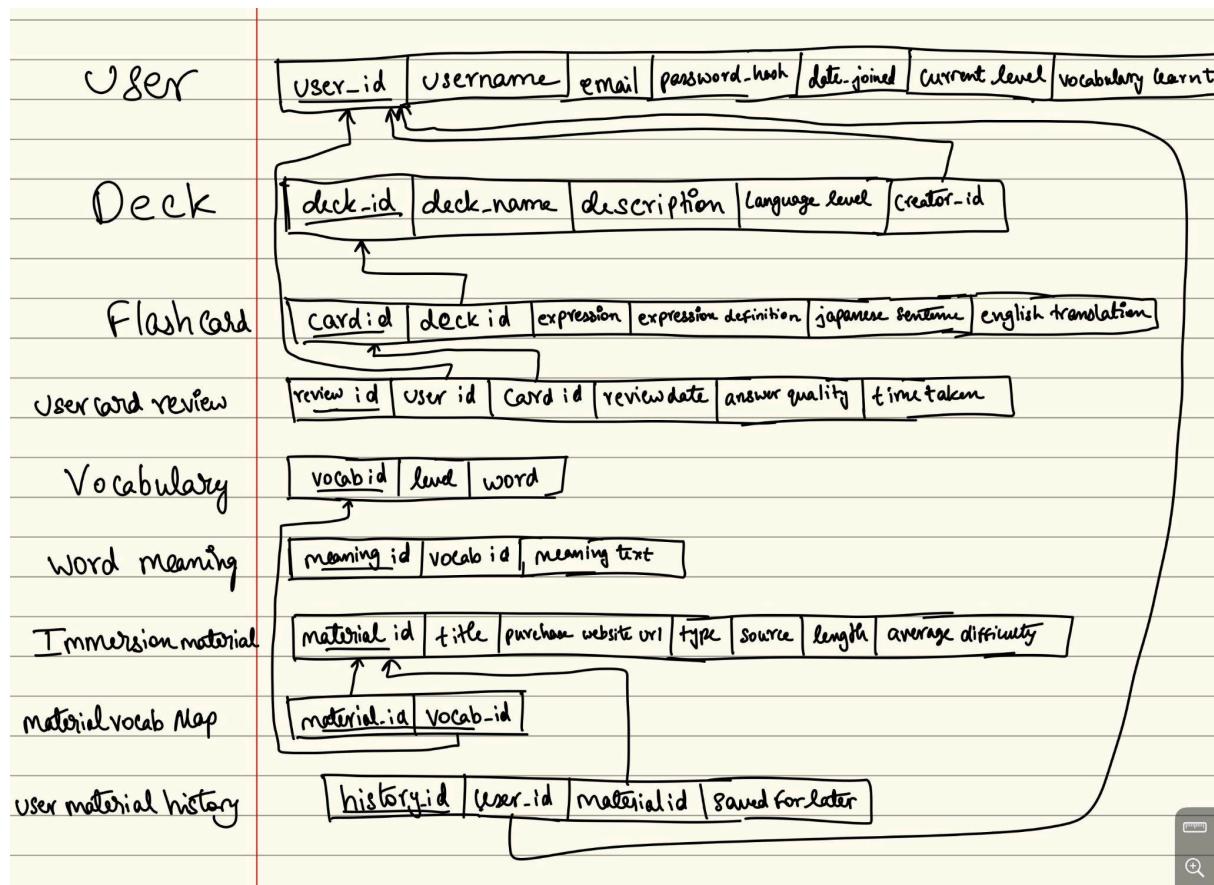

The foundation of the application:

- **MySQL Database:** Utilizes a comprehensive MySQL schema.
- **Data Management:** Tracks and stores all critical information, including user progress, review history, and material consumption records.
- **Scalability:** Designed to efficiently support multiple users and flashcard decks.
